Introduction

Dealing with different materials in the field of digital marketing is essential, as you must have experience with the materials you are dealing with when purchasing and have prior preparation for all the processes that this material will go through until it reaches the customer in its final form. Examples of these processes include

- Determining the appropriate material for the customer
- Manufacturing
- Printing on the material
- Handling material during delivery

There are also different details for each process. In the printing process, we have indoor printing and outdoor printing.

Let's start with the most common material used in our field, which is paper, and talk more about its details.

1. Papers:

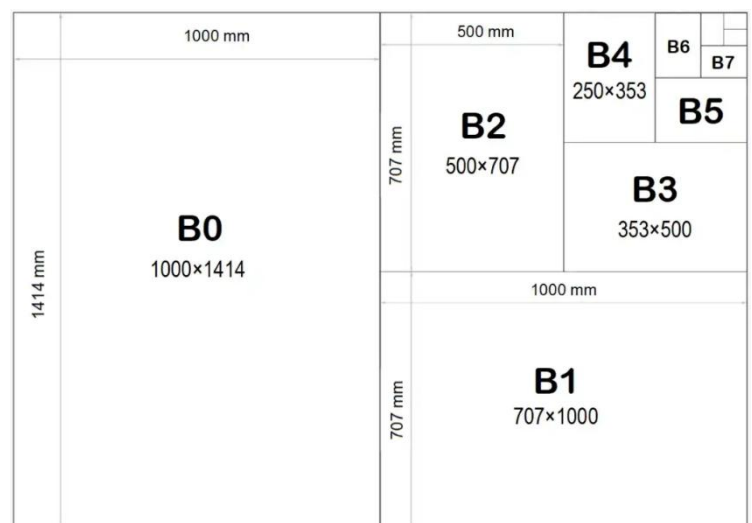

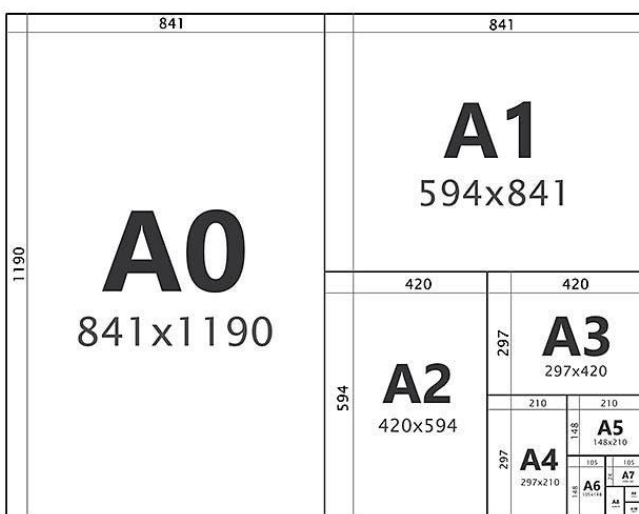

There are many types of paper, but the two most common types used in digital marketing are:

- **Plain paper**
- **Cushion paper**
- **Postol Cushion paper**

There are also many paper sizes starting from A0 and up to A10 and there are also other sizes of B series paper, but they are less commonly used and here is an explanation of the different sizes:

- A0 = 84*118 cm
- A1 = 59*84 cm
- A2 = 42*59 cm
- A3 = 29*42 cm
- A4 = 21*29 cm
- A5 = 14.5*21 cm
- A6 = 10*14.5 cm
- A7 = 10*7.5 cm
- A8 = 7.5*5 cm
- A9 = 5*3.5 cm
- A10 = 3.5*2.5 cm
- B0 = 100*141 cm
- B1 = 70.5*100 cm
- B2 = 50*70.5 cm
- B3 = 35*50 cm
- B4 = 25*35 cm
- B5 = 17.5*25 cm
- B6 = 12.5*17.5 cm
- B7 = 8.8*12.5 cm
- B8 = 6*8.5 cm
- B9 = 4*6 cm
- B10 = 3 *4 cm

However, the most common sizes we use in digital marketing are from **A3 to A7**.

1.1 Plain paper:

Such as the paper used inside the notebook or the paper used inside the notebook that is written on, and the weight of regular paper is less than the coated paper, and its weights are:

- 60 gm

- 80 gm

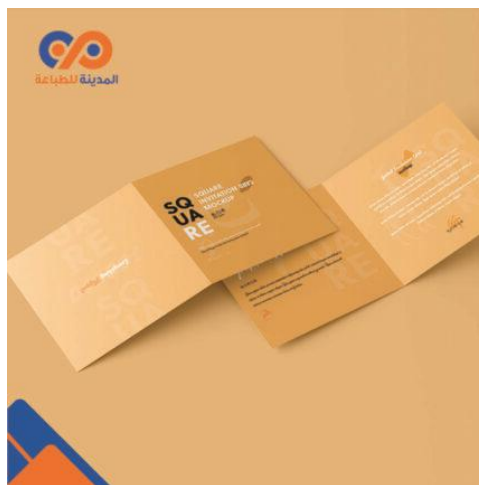

- 100 gm

1.2 Cushion paper:

Coated paper is heavy paper and is often used for covers such as notebook covers, book covers, cards, etc. One of the most important characteristics of coated paper is its weight. The weights of coated paper are:

- 115 gm
- 130 gm
- 150 gm
- 200 gm
- 250 gm
- 300 gm
- 350 gm

1.3 Prostol Cushion paper:

It is a paper that is heavier than regular coated paper and is used to make very heavy papers such as hard covers and others.

2. Printing:

Printing is essential in digital marketing work, and the types of printing vary according to the printed material, whether plain paper, cloth, metal, etc.

Printing can be divided into three main sections:

1. Paper printing
2. Indoor printing
3. Outdoor printing

2.1 Paper Printing:

Printing on paper varies in terms of the amount of printing, the degree of required colors, and the delivery deadline. Therefore, we can divide printing on paper into two main sections, which are:

1. Digital:

- Using powder colors
- Machine copies and pastes directly onto the material
- This printing is faster and cheaper in small quantities, but it is more expensive and slower in large quantities.
- More suitable for sample (with clarification to the customer that colors may differ by 10%)

2. Offset:

- Using watercolors
- The machine mixes the colors until the desired color is reached.
- Printing is cheaper and faster for large quantities, but it is much more expensive for small quantities.
- Printing resolution higher
- Colors clearer
- Its primary colors are (red - green - blue) and its special colors are (gold - silver).

2.2 Indoor printing:

This section of printing includes gifts, cards and various papers. The types of printing differ according to several criteria such as the material required to be printed on - the intensity of the required colors - the delivery deadline. This section of printing does not include outdoor advertisements on the streets or outdoor banners and other things.

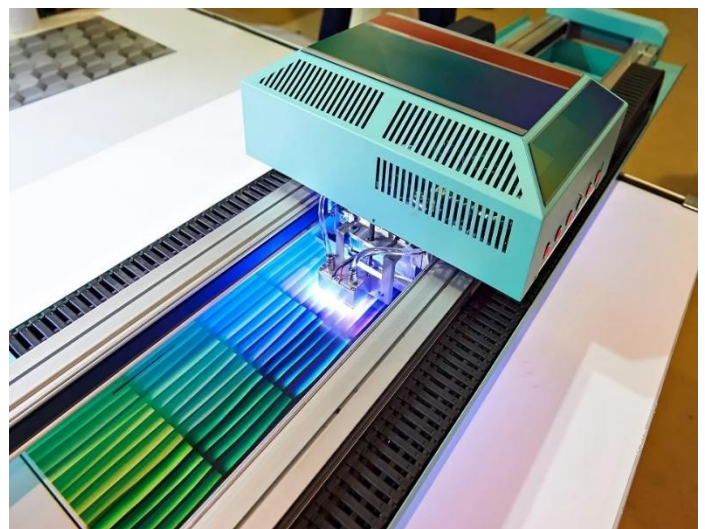

Indoor printing types can be divided into:

- U.V
- Silk Screen
- Sublimation
- TTF
- TTF - U.V

1. U.V:

- Direct printing, print on the material, copy and paste
- Almost zero printing waste

2. Silk Screen:

- Using water colors
- It is preferable to print in one color (it is possible to print in more than one color, but it may fade or bleed)
- There will be a lot of waste until we reach the desired color level.

3. Sublimation:

- Suitable for printing on clothes and bags
- The cheapest type of printing for bags
- Printing material is paper (the logo is printed on paper and then heat-pressed onto the material to be printed on)

4. TTF:

- Best type of printing on clothes
- Takes longer time to print

5. TTF - U.V:

When combined, TTF UV Printing may refer to printing text using TTF (TrueType Fonts) fonts using UV printing technology on various surfaces, providing high resolution text printing with superior color quality and excellent durability.

- Latest types of printing
- Suitable for laptop badge printer
- Takes less time to print than the regular TTF

3. Stickers:

Stickers have many uses in the field of digital marketing, and there are different types, any shape can be made by a template for it and using it to cut the sticker from the main sheet and the most important of which are:

- Tc sticker
- Jac sticker

3.1 TC sticker:

The main size of the chick is 60*100 cm and the adhesive type is lighter than the jac sticker.

3.2 Jac sticker:

The main size of the chick is 60*100 cm and the adhesive type is stronger than the jac sticker and its material is stronger as well.

4. Important definitions:

There are some important definitions that you must know in the field of digital marketing to deal with the customer and understand his requirements.

4.1 Lamination:

It is a layer that can be placed over the paper or printed material, giving it intensity and shine. There are two types of lamination (**glossy** - **matte**).

4.2 Die cut:

It is an extra part of the printing outside the borders of the paper, such as completing a logo or other.

4.3 Dangler:

It is a coated paper printed with the logo or anything related to the company and is hung like Ramadan decorations that have advertisements for the company on them.

4.4 Rega:

Rega is a folded paper made of Cushion paper like restaurant menus.

4.5 Flyer:

It is a coated paper that is printed on and distributed like advertising paper that is distributed in the streets.
